

Identify Bankruptcies with Confidence

According to the American Bankruptcy Institute, there were 733,897 non-commercial bankruptcy filings in the United States in 2016, an average nationwide per capita of 2.48 bankruptcies for every 1,000 people. With such high numbers – especially in the collections industry – it is important to have a bankruptcy product that can quickly and accurately identify bankruptcy statuses.

Comprehensive Databases

Our bankruptcy products return less false positives and false negatives, reducing regulatory risk and preventing lost revenue opportunities. We accomplish this by obtaining data from 93 court sites, 281 court divisions/offices and internally appending social security numbers from six databases to ensure data accuracy.

Optional Dismissed Hits

The Simplicity platform allows you to easily select whether or not you'd like dismissed hits returned in your file. This option gives you additional control over the data you receive and potentially minimizes unnecessary skip tracing expenses.

Enhanced Accuracy through Human Intervention

Did you know that up to 6% of bankruptcy records contain errors? To correct this, we use a data quality team to validate the bankruptcies, in addition to standardizing the name and address information. This additional step helps to prevent missed revenue opportunities and reduce risk exposure.

Maximize your debt recovery potential by focusing on the right accounts and reducing regulatory risk. Contact Simplicity today.
